SUMMARY

CSE grad who thinks like a PM and builds like an engineer. Uses **Claude, ChatGPT, Codex, and Lovable** to turn a product idea into a working prototype in days. Spots what users struggle with, decides what to build first, and ships it. Best fit for an Tech team that needs a PM who can build and Communicate.

WORK EXPERIENCE

Software Development Intern | NoKasa

May 2025 – June 2025

Shipped features during **live product launch week** with real users from day one and zero ramp-up.

Tracked where customers were dropping off mid-flow, watched real usage patterns, and traced the drop-off to a specific UI friction point rather than guessing at the fix.

Talked directly with affected users to confirm the cause, then redesigned the flow and shipped a fix within the same sprint.

Collaborated with engineering and design to align releases with **product goals** across Agile sprints.

Defined **scope, tradeoffs, and success metrics** for new feature modules in cross-functional discussions.

PROJECTS

CorpHire | AI-Native Hiring Marketplace

[Live Prototype](#) [Walkthrough Video](#)

Built a reverse hiring marketplace where candidates list themselves once and recruiters unlock contact directly, instead of both sides repeating manual work across separate portals and outreach.

Wrote the **full PRD, design system, and tech stack before writing any code**. Built the MVP in under **3 days** using **Lovable, Claude, and Codex**.

Tested the prototype with real early users, watched where they got confused, and changed the flow based on what actually broke, not what people said in feedback forms.

PRODUCT PORTFOLIO

PRDs, Product Strategy, Teardowns, Competitive Analysis

[View Portfolio](#)

I use the product, find where it breaks, then write the fix. 15+ documents, a few highlights:

Build: **Ola Family Mobility**, a 2035 plan to reach 100M users. **Josh Talks**, a PRD for 1M+ village images, because AI knows the Eiffel Tower but not Rath Yatra. **VectorShift**, describe a workflow in one line and the product builds and tests it. Also Yatra, Pixxel.

Break: **LinkedIn Jobs** stops helping the moment you hit Apply. **Flipkart Minutes**: store closed should not mean browsing closed.

Visible: AI picked a rival and marketers can't see why. **TwinMind** forgets you on reinstall. Also TAL, BlinkMoney, Vocallabs etc.

SKILLS

Product Skills:	PRD Writing, Feature Prioritization, Roadmapping, User Research, A/B Testing Experimentation, Metrics Thinking, Hypothesis Testing, Product Discovery
AI Workflows:	Prompt Engineering, LLM Workflows, AI UX, Human-in-the-Loop Systems
Technical:	Dart, Flutter, Python, Kotlin, Java, C, Supabase, REST APIs
Dev Tools:	Claude, Cursor, Google Antigravity, ChatGPT, Lovable, Git, Figma, Jira, Notion
Product Execution:	Wireframing, User Flows, Rapid Prototyping, Agile Workflows
Data:	SQL, Excel, Google Workspace, KPI Tracking

CERTIFICATIONS

Model Context Protocol (MCP) | Anthropic

March 2026

Covers **AI agent orchestration**, tool use, and context management for production-grade AI workflows.

McKinsey Forward Program | McKinsey & Company

Dec 2025

Applied structured problem solving, stakeholder-focused thinking, and communication frameworks.

Google Project Management Specialization | Google

Aug 2025

Hands-on experience with project initiation, stakeholder mapping, OKRs, metrics, and risk planning.

Product Management Job Simulation | Electronic Arts & Forage

Jan 2026

Completed hands-on tasks focused on **defining KPIs**, tracking metrics, and planning data-driven product decisions.
