## SUMMARY

CSE grad building AI-first products end to end. Uses **Claude, Cursor, Google Antigravity, and Lovable** to write PRDs, prototype fast, and ship working products. Thinks in user flows, tests with real users, and changes direction based on what actually happens, not what was planned.

## WORK EXPERIENCE

**Software Development Intern | NoKasa** May 2025 – June 2025  
Shipped features during **live product launch week** with real users from day one and zero ramp-up.  
Tracked where customers were dropping off mid-flow, watched real usage patterns, and traced the drop-off to a specific UI friction point rather than guessing at the fix.  
Talked directly with affected users to confirm the cause, then redesigned the flow and shipped a fix within the same sprint.  
Collaborated with engineering and design to align releases with **product goals** across Agile sprints.  
Defined **scope, tradeoffs, and success metrics** for new feature modules in cross-functional discussions.

## PROJECTS

**CorpHire | AI-Native Hiring Marketplace** Live Prototype   Walkthrough Video  
Built a reverse hiring marketplace where candidates list themselves once and recruiters unlock contact directly, instead of both sides repeating manual work across separate portals and outreach.  
Wrote the **full PRD, design system, and tech stack before writing any code**. Built the MVP in under **3 days** using **Lovable, Claude, and Google Antigravity**.  
Tested the prototype with real early users, watched where they got confused, and changed the flow based on what actually broke, not what people said in feedback forms.

## PRODUCT PORTFOLIO

**PRDs, Product Teardowns, Case Studies, Competitive Analysis** [View Portfolio](#)  
Live interactive portfolio covering PRDs, competitor teardowns, and case studies across real products.  
**Product Teardowns:** TAL / Grapevine, BlinkMoney, Vocallabs, TwinMind, LinkedIn Jobs – unprompted product observations on trust, onboarding, and conversion friction.  
**Strategy & Case Studies:** Flipkart Minutes, VectorShift, Visiblie, Apple, Yatra, Pixxel, MPassport Seva, Josh Talks, Newton School – product strategy notes, case studies, and competitive analysis across consumer and enterprise apps.

## SKILLS

|                           |                                                                                |
|---------------------------|--------------------------------------------------------------------------------|
| <b>Product Skills:</b>    | PRD Writing, Feature Prioritization, Roadmapping, User Research, A/B Testing   |
| <b>AI Workflows:</b>      | Experimentation, Metrics Thinking, Hypothesis Testing, Product Discovery       |
| <b>Technical:</b>         | Prompt Engineering, LLM Workflows, AI UX, Human-in-the-Loop Systems            |
| <b>Dev Tools:</b>         | Dart, Flutter, Python, Kotlin, Java, C, Supabase, REST APIs                    |
| <b>Product Execution:</b> | Claude, Cursor, Google Antigravity, ChatGPT, Lovable, Git, Figma, Jira, Notion |
| <b>Data:</b>              | Wireframing, User Flows, Rapid Prototyping, Agile Workflows                    |
|                           | SQL, Excel, Google Workspace, KPI Tracking                                     |

## CERTIFICATIONS

**Model Context Protocol (MCP) | Anthropic** March 2026  
Covers **AI agent orchestration**, tool use, and context management for production-grade AI workflows.

**McKinsey Forward Program | McKinsey & Company** Dec 2025  
Applied structured problem solving, stakeholder-focused thinking, and communication frameworks.

**Google Project Management Specialization | Google** Aug 2025  
Hands-on experience with project initiation, stakeholder mapping, OKRs, metrics, and risk planning.

**Product Management Job Simulation | Electronic Arts & Forage** Jan 2026  
Completed hands-on tasks focused on **defining KPIs**, tracking metrics, and planning data-driven product decisions.
